SUMMARY

Frontend Engineer / Software Engineer with 9+ years of professional experience, including 5+ years building production-grade web applications at Smeetz, a Swiss SaaS platform for venue ticketing and point-of-sale used across Europe. Helped build the Point of Sale (POS) application from the ground up and spent two years as POS Squad Team Lead — driving technical decisions, running sprint and release planning and squad retrospectives, mentoring engineers, and owning delivery for a product used daily by operators continent-wide. Diagnosed and resolved a critical performance issue that let the POS app scale from handling ~100 tickets per order to 1,000–1,500 with no degradation. Also contributed across Smeetz's B2C app, B2B/back-office tooling, and shared services, integrated Adyen payment processing, and rewrote ~95% of its waiver signature flow application. Currently deepening my skills in agentic AI software engineering. Seeking a remote or relocation-sponsored Frontend / Software Engineer role.

EXPERIENCE

Frontend Engineer · Smeetz

Mar 2021 – Jul 2026 · Lausanne, Switzerland · Remote

- Contributed to the Point of Sale (POS) application from day one, helping architect and build it into a production system used by venues across Europe. (Vue 3, Composition API, TypeScript, Vuex, GraphQL, REST API, Electron, Cypress)
- Served as POS Squad Team Lead for 2 years, leading a cross-functional team of 5 (2 frontend engineers, 1 backend, 1 QA, 1 product owner) — drove technical decisions, ran code reviews, facilitated sprint planning, release planning, and squad retrospectives, and mentored engineers.
- Diagnosed and fixed a critical performance bottleneck causing the POS app to lag on large orders; the fix scaled reliable order handling from ~100 tickets to 1,000–1,500 tickets with no degradation, profiling with Chrome DevTools and Lighthouse.
- Integrated and maintained payment processing in the POS application via Adyen, supporting in-person ticketing transactions and third-party API integrations.
- Maintained the customer-facing B2C application and the internal B2B / back-office application, adding new features and fixing bugs on both. (Vue 2, Options API, TypeScript, Vuex, REST API, Cypress)
- Rewrote ~95% of the waiver signature flow application. (Vue 3, Composition API, TypeScript, REST API, Cypress)
- Designed and built an offers library within the shared services layer, centralizing discount management across the platform.
- Implemented offline support for the POS app (offline-first, using Vuex and localStorage) so ticket sales continued uninterrupted without a network connection; wrote and maintained GraphQL queries, contributed to internationalization (i18n) for a pan-European user base, and built Cypress test suites for core user flows.

Stack: Vue 3, Vue 2, Composition API, Options API, TypeScript, GraphQL, REST APIs, Vuex, SCSS, Vite, Electron, Cypress, ESLint, Prettier, Git, Bitbucket, Bitbucket Pipelines, Adyen, Seats.io, GitHub Copilot

Full Stack Developer · Public Sector Organization

Jun 2016 – Mar 2021 · Algiers, Algeria

- Sole developer responsible for building and maintaining internal enterprise web applications, owning the full delivery cycle from requirements gathering through development, testing, and deployment.

Stack: ASP.NET Core MVC, C#, SQL Server, JavaScript, HTML5, CSS3, Bootstrap

EARLIER EXPERIENCE

Home Entertainment Demand Planner · LG Electronics Algeria

2013 – 2016 · Algiers, Algeria

Sales forecasting and inventory planning for the Home Entertainment product line; coordinated weekly S&OP meetings across supply chain, sales, and AR teams.

Warehouse Supervisor / Customer Service Representative · Agility Logistics Algeria

2011 – 2015 · Blida, Algeria

Supervised daily warehouse operations and customer service for a logistics company, overseeing a team of 29 across inbound, outbound, and quality functions.

EDUCATION & TRAINING

Master's Degree, Computer Software Engineering

Université Saad Dahlab de Blida · 2005 – 2010

Thesis: Intelligent case-based reasoning system for construction cost estimation.

Microsoft Official Courses — Web Development

IT Comp · 2018 – 2020

Programming in HTML5 with JavaScript & CSS3 · Developing ASP.NET Core MVC Web Applications · Enterprise ASP.NET Core MVC (Clean/Onion Architecture)

SKILLS

Frontend: Vue 3 (Composition API), Vue 2 (Options API), TypeScript, JavaScript, HTML5, CSS3, SCSS, Vuex, Pinia, GraphQL, REST APIs, Vite, Electron, Cypress

Tooling & DevOps: Git, Bitbucket, Bitbucket Pipelines, ESLint, Prettier, GitHub Copilot

Performance & Domain: Performance Optimization, Chrome DevTools, Lighthouse, Payments Integration (Adyen), Seat Mapping (Seats.io), Internationalization (i18n), Offline-First Architecture

Backend: ASP.NET Core, C#, SQL Server, RESTful APIs

Leadership & Process: Team Leadership, Mentoring, Code Review, Sprint Planning, Release Planning, Squad Retrospectives, Technical Decision-Making, Agile/Scrum, Cross-functional Collaboration

Currently focused on: Agentic AI software engineering, Claude Code, AI-assisted development workflows
